

WYSI

(not always)

WYDG

(but it can be)

Andrew Mallis

OUTLINE

- ▶ **context**
- ▶ **modules!**
- ▶ **arm you with concepts**
- ▶ **demo site!**
- ▶ **the distro**

the google doc

<http://bit.ly/oC2xDC>

whatchu want?

**whatchu
get**

the solution...

LOTS OF MODULES!

**IT IS NOT
AS BAD AS
YOU THINK,
BUT IT IS
DIRTIER**

text-input

- ▶ **wysiwyg** – the api that enables 3rd party editors
- ▶ **wysiwyg_filter** – input filter that gives us control over HTML output (think: output filter)
- ▶ **better_formats** – define input formats per content type (in D7 core now) and more

Media!

- ▶ **wysiwyg** – the api that enables 3rd party editors
- ▶ **filefield_sources** – re-use existing files, upload via URL
- ▶ **insert** – adds a button to insert images or file links into textfields from image/file fields
- ▶ **image_resize_filter** – creates on-the-fly image-style/imagecache derivatives when inline images are resized
- ▶ **imce** + **imce_wysiwyg** – configurable image/file uploader and browser that supports personal & shared directories and quotas
- ▶ **imagecache** [6.x] – create derivative images from a single file for presentation in different contexts
- ▶ **itweak_upload** [6.x] – beautifies file upload forms

Paths / SEO

- ▶ **pathauto** – automatically generates path aliases according to configurable patterns
- ▶ **transliteration** – rename files on upload to use only US-ASCII characters
- ▶ **filefield_paths** – use node tokens in destination paths and filenames
- ▶ **pathologic** – input filter that makes image links in content areas relative (most useful for feeds)

TEXT (INPUT) FORMATS

- ▶ create 2 new text formats
 - ▶ text editor
 - ▶ advanced text editor

WYSIWYG profiles

- ▶ Tame the CSS
- ▶ Custom module adds node class to CKEditor <body>

why ckeditor?

- ▶ **doesn't look scary**
- ▶ **force clean-up on paste**
- ▶ **easy inclusion of custom styles**
- ▶ **everyone else is doing it**

MEDIA!

ALL GROWED UP!

▶ CLICK TO SEE

file management

- ▶ **sanitize uploads with transliteration and filefield_paths**
- ▶ **structure where uploads go**

1. attachments

2. images

- ▶ **FIELDS**
- ▶ **INLINE IMAGES**

the distro

https://github.com/ideograph/ideograph_wysiwyg-build

- ▶ **.make file**
- ▶ **simple profile (for now)**
- ▶ **bartik subtheme**
- ▶ **custom module**
- ▶ **features: article, users, permissions, util (coming soon)**

1. build it

```
$ drush make ideograph_wysiwyw.make ideograph.wysiwyw
```

2. install it

- ▶ via UI by selecting the "ideograph wysiwyg" profile
- ▶ or, with drush:

```
$ drush site-install ideograph.wysiwyg \  
--site-name='WYSIWYG tests' \  
--db-url=mysql://dbuser:dbpassword@localhost/database_name \  
--db-su=dbuser --db-su-pw=dbpassword \  
--account-name=root --account-pass=wysiwyg \  
--site-mail=your_email@domain.com
```

roll your own!
